#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Allowable Subject Matter***

The indicated allowability of claims 1-18 and 32 are withdrawn in view of the following rejection below.

### ***Claim Rejections - 35 USC § 112***

Claim 32 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Examiner is unsure what is meant by "a logic circuit coupled to first and second signals, said first and second signals coupled to said host controller and to said peripheral, said logic circuit generating an internal signal in response to a direct transition between a first state and a second state of said first and second signals wherein said host controller is configured to prevent a direct transition from said first state to said second state when changing the state of said first and second signals as necessary to perform input to or output from said peripheral," specifically Examiner is confused how first a "logic circuit" generates an internal signal in response to a direct transition between a first state and a second state and then a host controller prevents a direct transition. First, is this the same "direct transition" that the logic circuit generates

Art Unit: 2182

or is this a different "direct transition?" Second, if this is the same "direct transition" how is it prevented after it has occurred in relation to the logic circuit? Further, Examiner is unsure of the clocking of the first and second state, in other words, is the "direct transition" in one clocking cycle or a first clock cycle for the first state and a second clock cycle for the second state? Third, if the host prevents a "direct transition" what or how is the host generating another "direct transition" in the last passage of the claim? Dependent claims 1-18 are also rejected because of the rejected Independent based. Explanation is requested in the following Office Action.

### ***Conclusion***
